<h1> - <h6>

Grace Murray Hopper (December 9, 1906 – January 1, 1992) was a United States Navy rear admiral. A pioneer in the field, she was the first to coin the term "debugging" for fixing computer glitches (inspired by an anecdote about a moth causing a short circuit in the Harvard Mark I computer, and invented the first compiler. She popularized the idea of machine-independent programming language of COBOL, one of the first modern programming languages. Owing to the breadth of her accomplishments and her name, the computer bug is named after her.

Párrafos
<p>

Whoever you are
Wherever you are
You only have to know one thing:
You can learn anything
Words from: You can learn anything
